

**BROOKS**

# Brooks Running Case Study

---

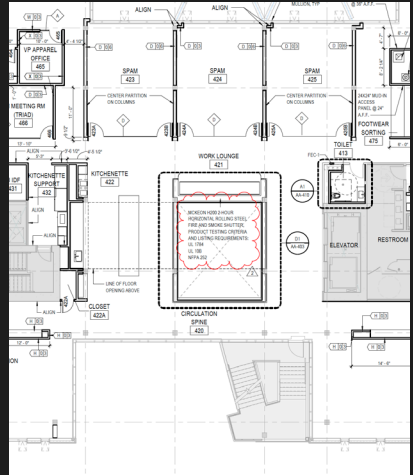

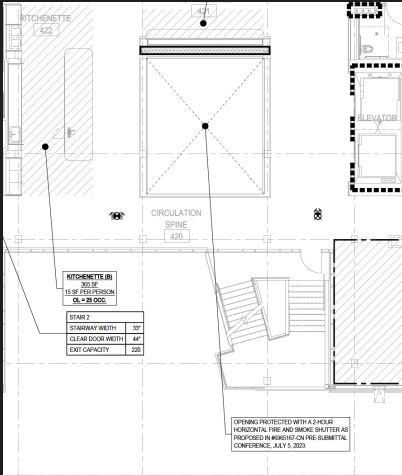

THE FIRST NORTH AMERICAN MASS TIMBER  
PROJECT USING A HORIZONTAL WIDE-SPAN  
OPENING PROTECTIVE IN ATRIUM DESIGN.

**Interior Tech partnered with NBBJ Design to provide atrium separation, limiting compartments to two stories and eliminating atrium provisions.**

The automatic closing H200 Series horizontal shutters prevent the migration of heat, smoke or hot/toxic gases by creating vertical compartments thereby separating the vertical spaces from one another.

# McKeon Auto-set H200

Horizontal fire shutters reduce construction costs. Smoke evacuation systems can become unnecessary and one horizontal fire shutter can be used in lieu of numerous conventional fire barriers on multiple floors.

The H200 is ideal for closing off penetrations in ceilings for atrium conditions as well as convenience stairways, escalator enclosures and skylights.

## Product Features

### Ratings

- 2-hour rated UL 10B\*
- Smoke & Draft labeled UL 1784  
*\*Listed under the Canadian equivalent CAN/ULC S104*

### Code Compliance

- CCRR-1086

### Operation

- Auto-Set® automatic resetting
- Fail-Safe Design – automatic self-closing mechanism does not require power operation

### Size

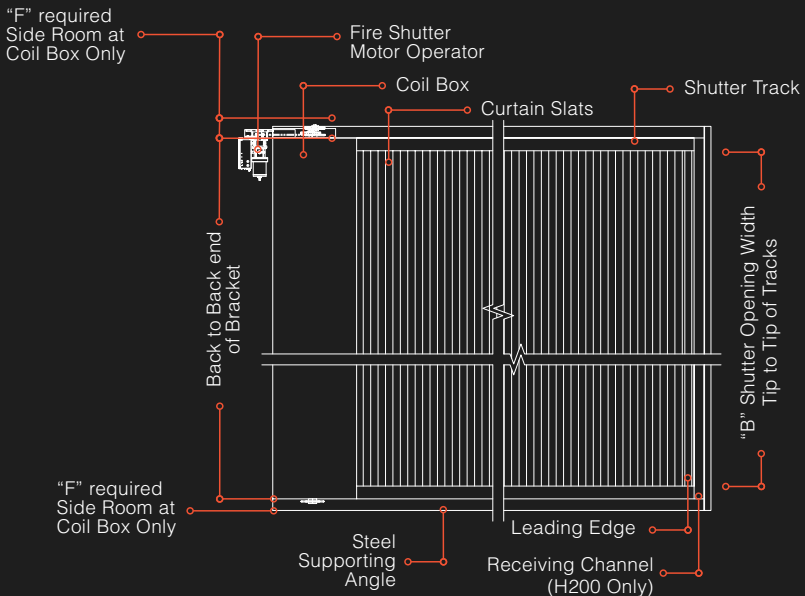

- Widths to 30', lengths to 90' (180' bi-parting); for larger sizes and custom configurations consult factory

### Function

- Interior and exterior applications
- Coiling on the horizontal plane

### Finishes

- McKEON Sterling Gray
- Powder coat of any color as selected
- Stainless Steel — No. 4 Polish or No. 8 Mirror

# Since 1947, InteriorTech has been a trusted design resource for architects in the Northwest.
